States (nx) = 35: T_w, T_r, v, ht * 16, ct * 16
Controls (nu) = 2: w_Tw and w_Tr
Output (ny) = 4
Parameters (p) = 5: 3 predefined controls(M_acc, M_brk, M_fric) + 1 other (phi)
The parameters are recorded and stored in 06_inputs/parameter_input_v2
